Introduction

The MGate 5119 is an industrial Ethernet gateway with 2 Ethernet ports and 1 RS-232/422/485 serial port. To integrate Modbus, IEC 60870-5-101, and IEC 60870-5-104 devices with an IEC 61850 MMS network, use the MGate 5119 as a Modbus master/client, IEC 60870-5-101/104 master, and DNP3 serial/TCP master to collect and exchange data with IEC 61850 MMS systems.

Easy Configuration via SCL Generator

The MGate 5119 as an IEC 61850 MMS server, typically, requires the import of a SCL file generated by a 3rd party tool. This can be time-consuming and increase costs. To overcome this pain point, MGate 5119 has a built-in SCL generator, which can easily generate SCL files through the web console and make them available almost immediately saving configuration time and cost.

Easy Troubleshooting via Traffic Monitor

MGate 5119 Series gateways support Modbus RTU/ASCII/TCP, IEC 60870-5-101, IEC 60870-5-104, and IEC 61850 MMS Protocol Traffic Monitor for easy troubleshooting, especially during the installation stage. It is worth mentioning that traffic logs can be viewed in the popular troubleshooting tool, Wireshark. With this feature, you can easily analyze traffic to determine the root cause of a problem.
